

[illegible]

The figure displays three network diagrams illustrating the relationships between educational institutions across different levels of education. The nodes represent institutions, and the edges represent the relationships between them.

Two-Mode: This diagram shows the relationships between institutions at the Two-Mode level. The nodes are labeled with institution names and their types (e.g., D09, D00, D06). The edges represent the relationships between these institutions.

Tertiary Projection: This diagram shows the relationships between institutions at the Tertiary Projection level. The nodes are labeled with institution names and their types (e.g., D09, D00, D06). The edges represent the relationships between these institutions.

High School Projection: This diagram shows the relationships between institutions at the High School Projection level. The nodes are labeled with institution names and their types (e.g., D09, D00, D06). The edges represent the relationships between these institutions.
