

The figure displays three network graphs illustrating the evolution of a research network over time, from a Two-Mode network to a High School Projection network.

**Two-Mode:** This graph shows a dense network of nodes and edges. Nodes are labeled with institutional names and research areas, such as "Polytechnic", "University", "Private.Training.Establishment", "SocialSci", "PhysicalScience", "Health", "Engineering", "CompSci", "Biology", and "Education". The network is highly interconnected, with many overlapping labels.

**Tertiary Projection:** This graph shows a similar dense network structure. Nodes are labeled with institutional names and research areas, such as "Polytechnic", "University", "Private.Training.Establishment", "SocialSci", "PhysicalScience", "Health", "Engineering", "CompSci", "Biology", and "Education". The network is highly interconnected, with many overlapping labels.

**High School Projection:** This graph shows a network structure where nodes are labeled with institutional names and research areas, such as "Polytechnic", "University", "Private.Training.Establishment", "SocialSci", "PhysicalScience", "Health", "Engineering", "CompSci", "Biology", and "Education". The network is highly interconnected, with many overlapping labels.
